

# Lecture 10 Applications/Deep Learning

COMP3204 & COMP6223 Computer Vision

**Where is feature extraction used these days?**

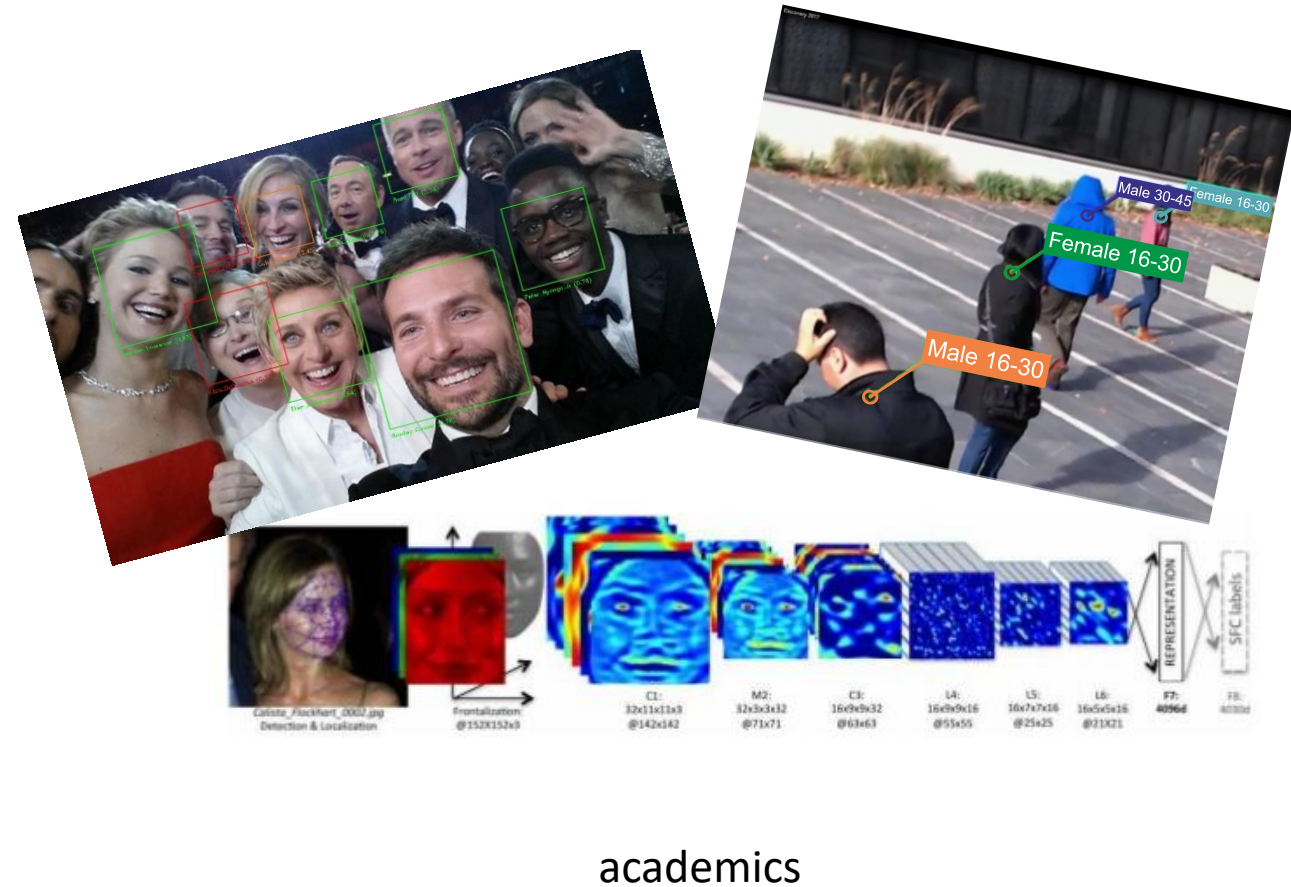

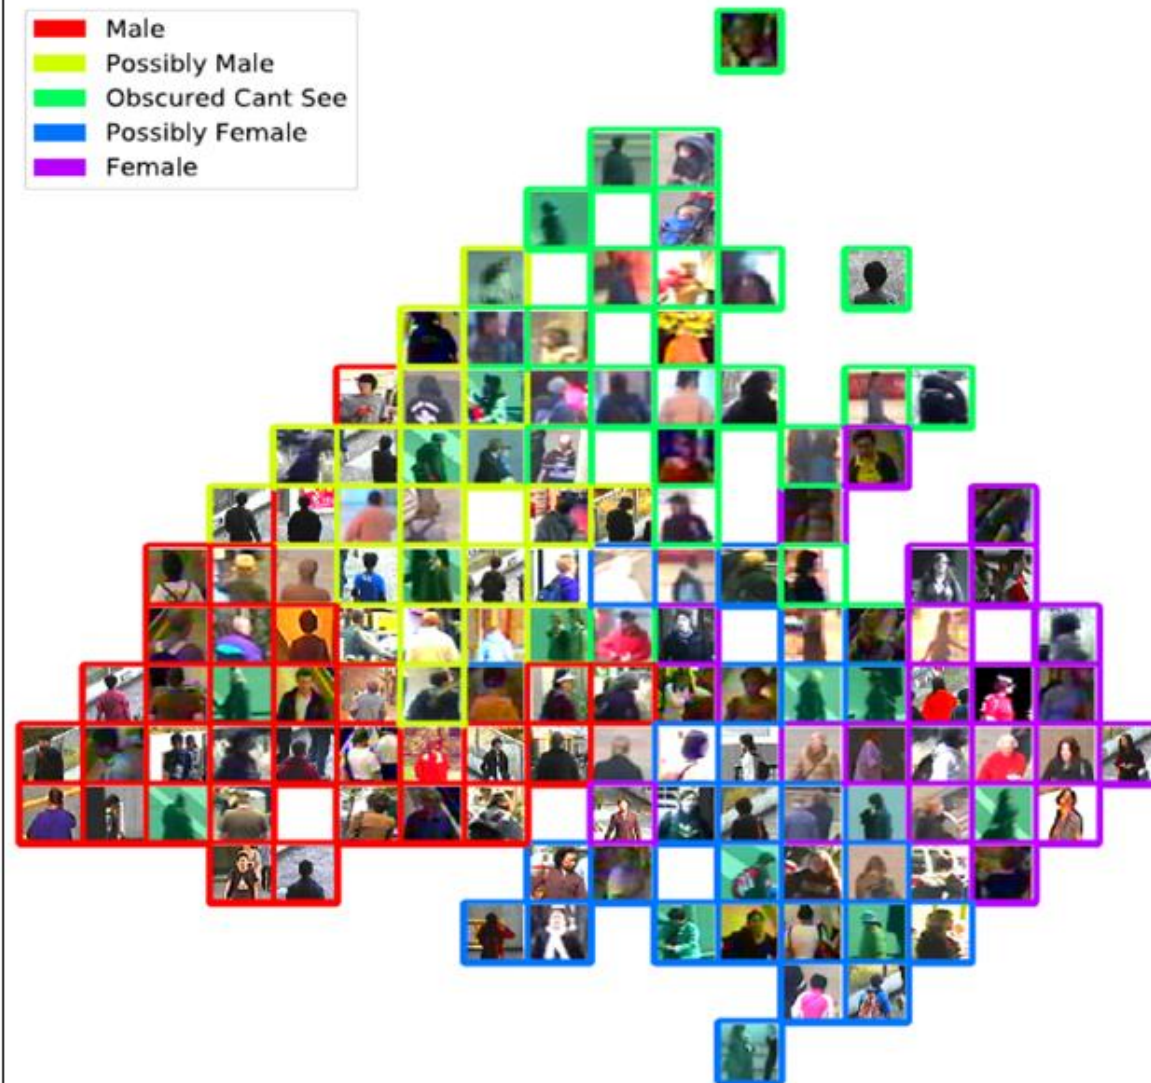

Department of  
Electronics and  
Computer Science

UNIVERSITY OF  
**Southampton**  
School of Electronics  
and Computer Science

# Where is computer vision used?

What you see depends on the viewpoint you take

(a) dataset of images classified by gender

(b) female

(c) possibly female

(d)  
obscured/  
can't see

(e) male

## Classifying People by Gender [Martinho-Corbishley18]

# On learning

**Main Approaches to Learning from Data**

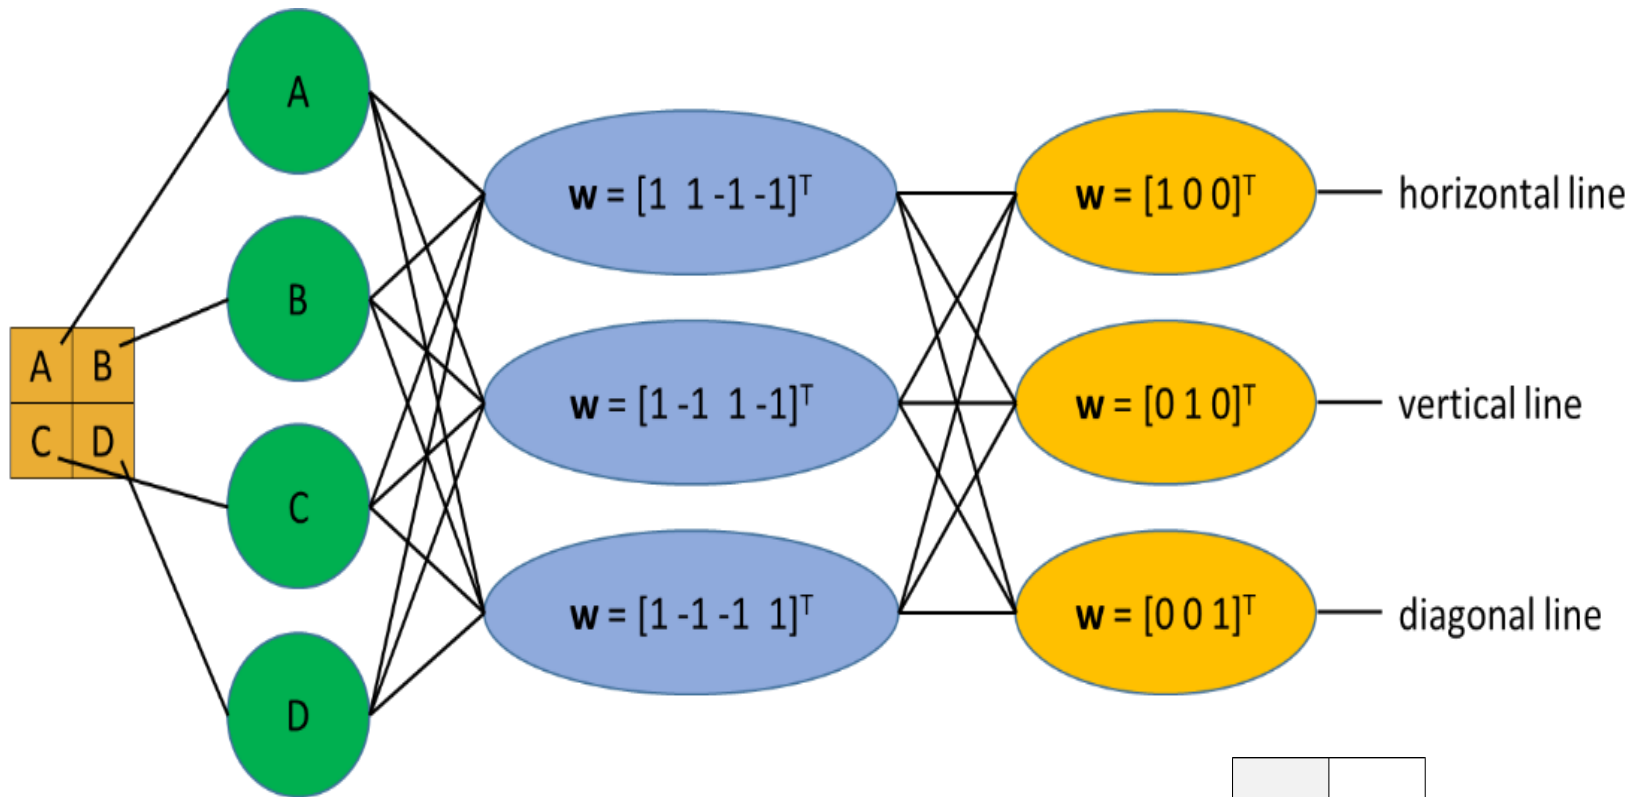

80's

# Basis of a Deep Neural Network

# Trained Example Neural Network

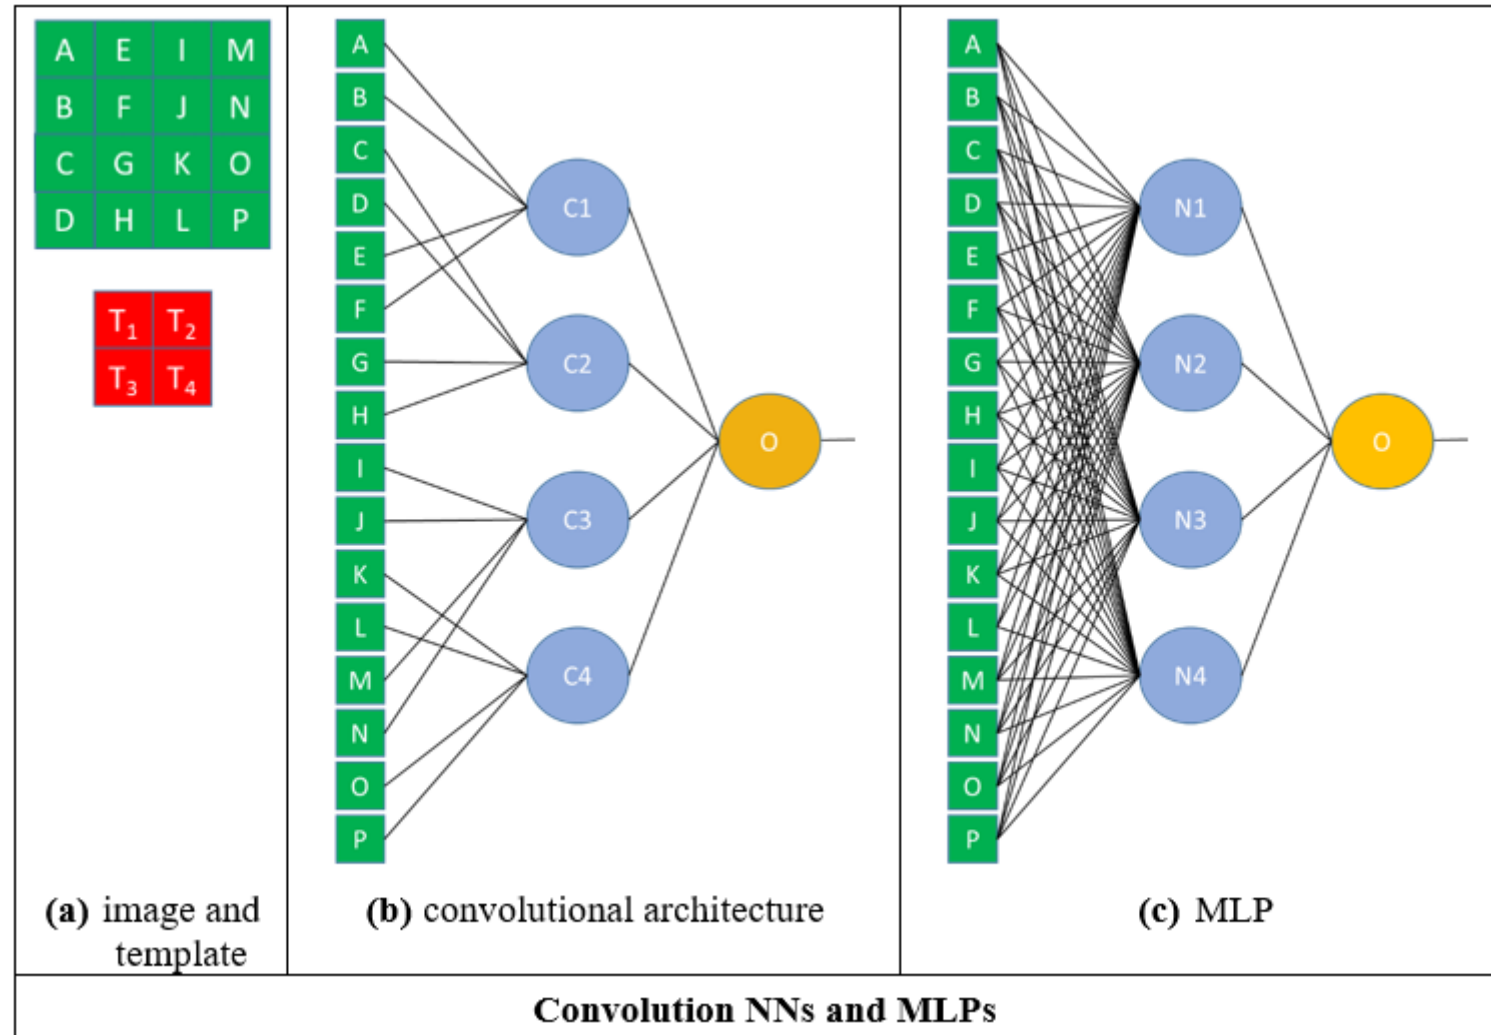

42	52	$\begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$
11	18	

22	52	$\begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$
11	48	

22	52	$\begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix}$
45	24	

# Convolutional vs MLP

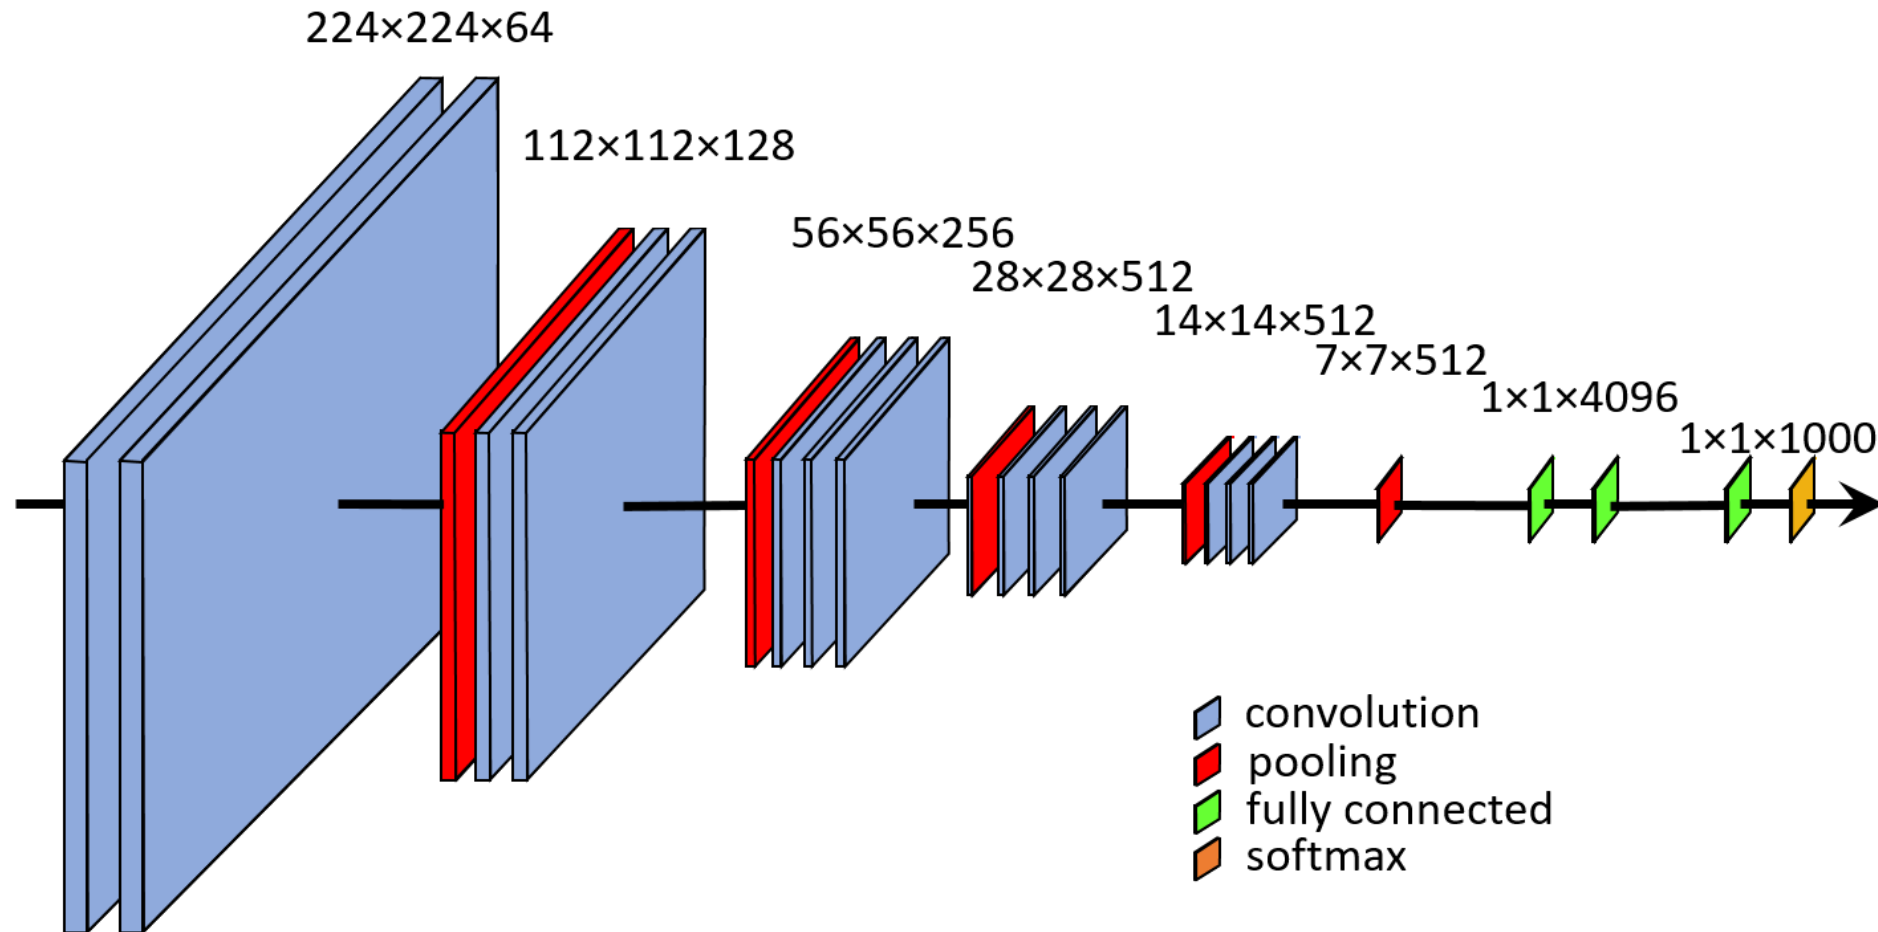

# Alexnet architecture

# VGG architecture

# Resnet architecture

(a) part of a database of face images

(b) level 1 features

(c) level 2 features

(d) level 3 features

(e) level 4 features

### Features at Different Levels in Deep Learning

(a) full image

(b) ground truth

(c) by interpolation

(d) by DRNN

(e) by LFSR

**Lightfield Image Resizing [Gul18]**

**(a)** image with added noise

**(b)** denoising by transform domain

**(c)** denoising by modified VGG

**Image Denoising [Zhang17]**

(a) some of the top activations

(b) semantic segmentation

## Object Extraction by Region-Based Convolutional Networks [Girshick16]

# Gender and Kinship by Model-Based Ear Biometrics

Approach is model-based for affine-  
and occlusion-invariance

# Motivation: Murder case in Australia 2014

# Automating eye witness statements

## Eyewitness statement

“24 year old male average height wearing shirt”

Generate description

## Image of crime

Subject	Gender	Age	Height	Nose W	Top
?	M	24	171	2.4	Shirt

## Database of images

Generate descriptions

Subject	Gender	Age	Height	Nose W	Top
123456	M	25	172	2.3	Shirt
123457	F	36	156	2.2	Blouse
123458	M	58	182	1.2	T shirt

## Database of descriptions

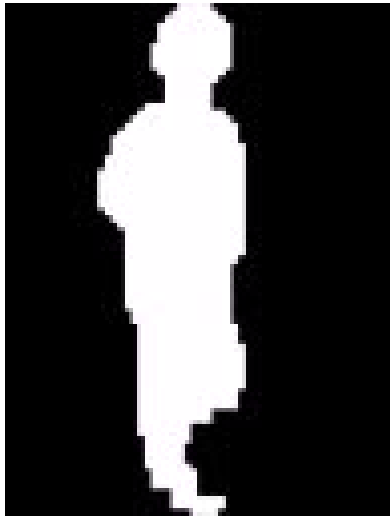

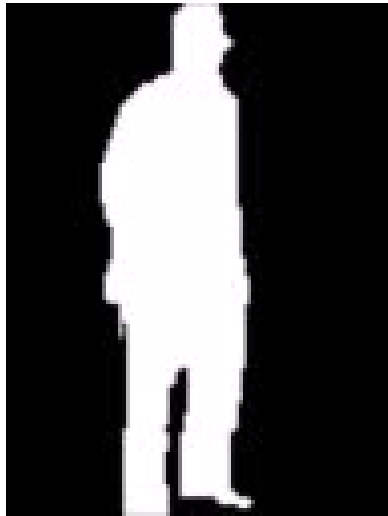

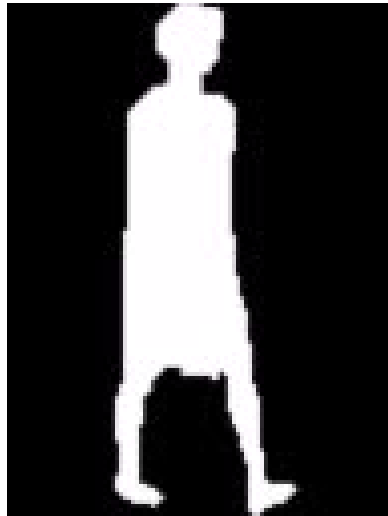

# Gender estimation on PETA

- Gender?

Subject	1	2	3
PETA image			
PETA label	A E	A B	A. Male B. Female

# Gait-based Age Estimation using a Whole-generation Gait Database

- How old is he/she?

Subject	1	2	3
Gait			
Age	A. 4 years old B. 14 years old C. 24 years old	A. 62 years old B. 72 years old C. 82 years old	A. 24 years old B. 34 years old C. 44 years old

# Traits and terms

## Body Features

- Based on **whole body** description **stability** analysis by **MacLeod** et al.
  - Features showing **consistency** by different **viewers** looking at the same **subjects**
- Mostly comprised of **5 point** qualitative measures
  - e.g. very fat, fat, average, thin, very thin
- Most likely candidate for **fusion** with gait

**This changed**

- Global
  - Sex
  - Ethnicity
  - Skin Colour
  - Age
- **Body Shape**
  - **Figure**
  - **Weight**
  - **Muscle Build**
  - **Height**
  - **Proportions**
  - **Shoulder Shape**
  - **Chest Size**
  - **Hip size**
  - **Leg/Arm Length**
  - **Leg/Arm Thickness**
- Head
  - Hair Colour
  - Hair Length
  - Facial Hair Colour/Length
  - Neck Length/Thickness

# Human descriptions: recognition capability

First result

# Comparative human descriptions

- Compare one subject's attribute with another's
- Infer continuous relative measurements

Please compare the subject in the lower video to the subject in the top video.  
**For example if the subject in the bottom video is taller than the subject**

Attribute	Annotation
Age	<input type="text" value="Older"/>
Bottom subject is OLDER than the top	
Hair Colour	<input type="text" value="Same"/>
Subjects have roughly the SAME hair colour	
Hair Length	<input type="text" value="Longer"/>
Bottom subject has LONGER hair than the top	
Height	<input type="text" value="Taller"/>
Bottom subject is TALLER than the top	
Figure	<input type="text" value="Same"/>
Subjects both have roughly the SAME figure	
Neck Length	<input type="text" value="Same"/>
Subjects have roughly the SAME length neck	
Neck Thickness	<input type="text" value="Thinner"/>
Bottom subject has a THINNER neck than the top	
Shoulder Shape	<input type="text" value="Same"/>
Subjects have roughly the SAME shoulder shape	
Chest	<input type="text" value="Same"/>
Subjects have roughly the SAME size chest	
Arm Length	<input type="text" value="Longer"/>
Bottom subject has a LONGER arms than the top	

# Height correlation (with time)

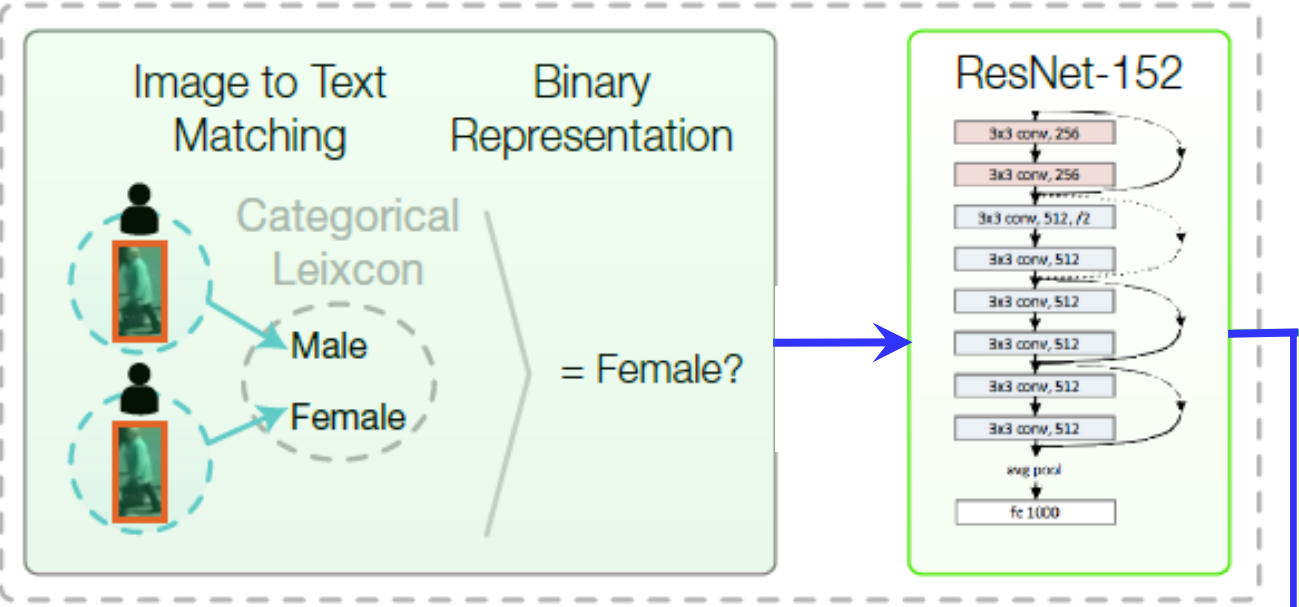

# Pairwise similarity comparisons on PETA

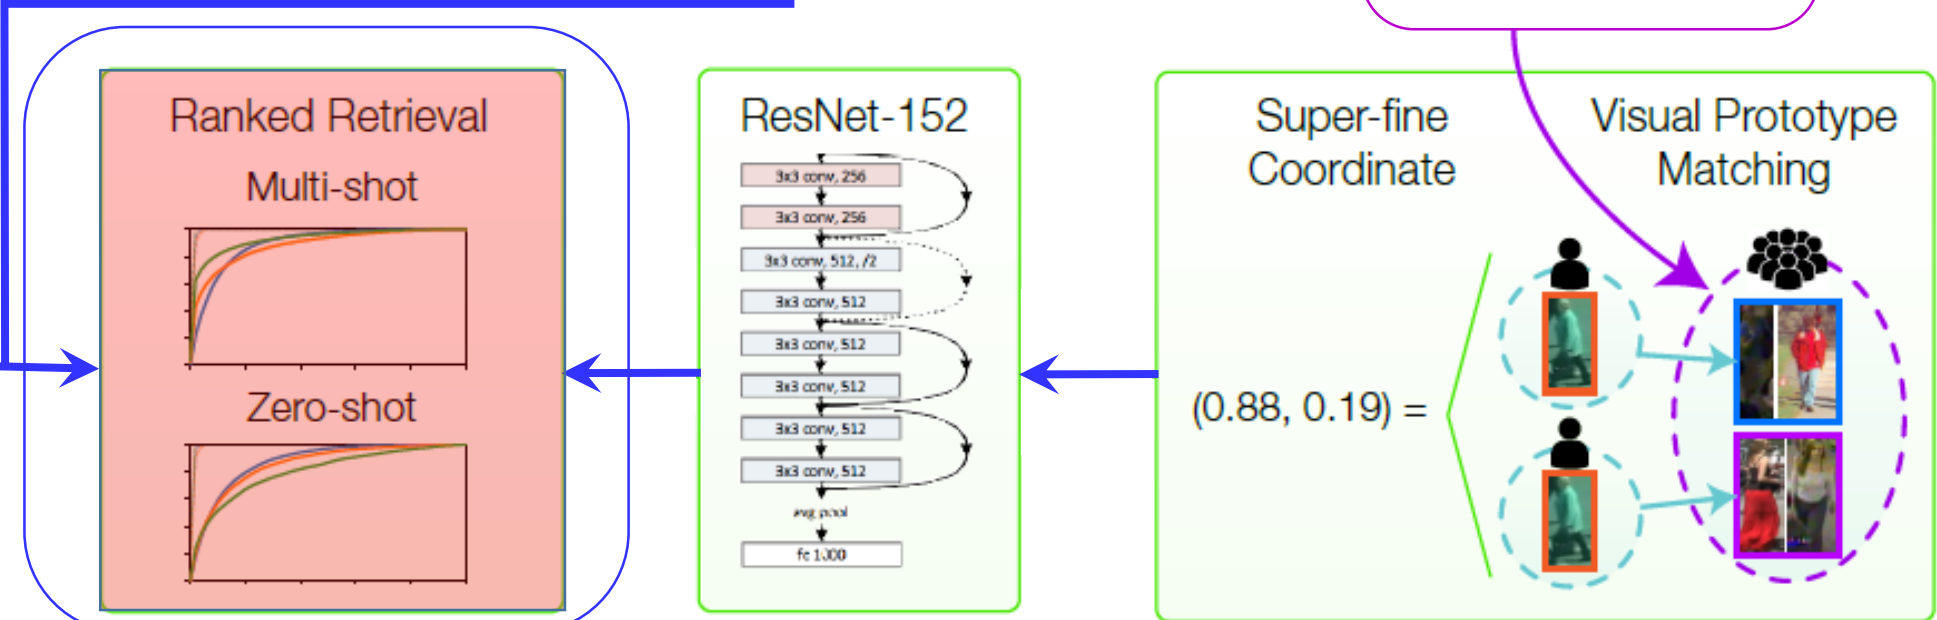

Gender distribution not binary  
Can measure confidence

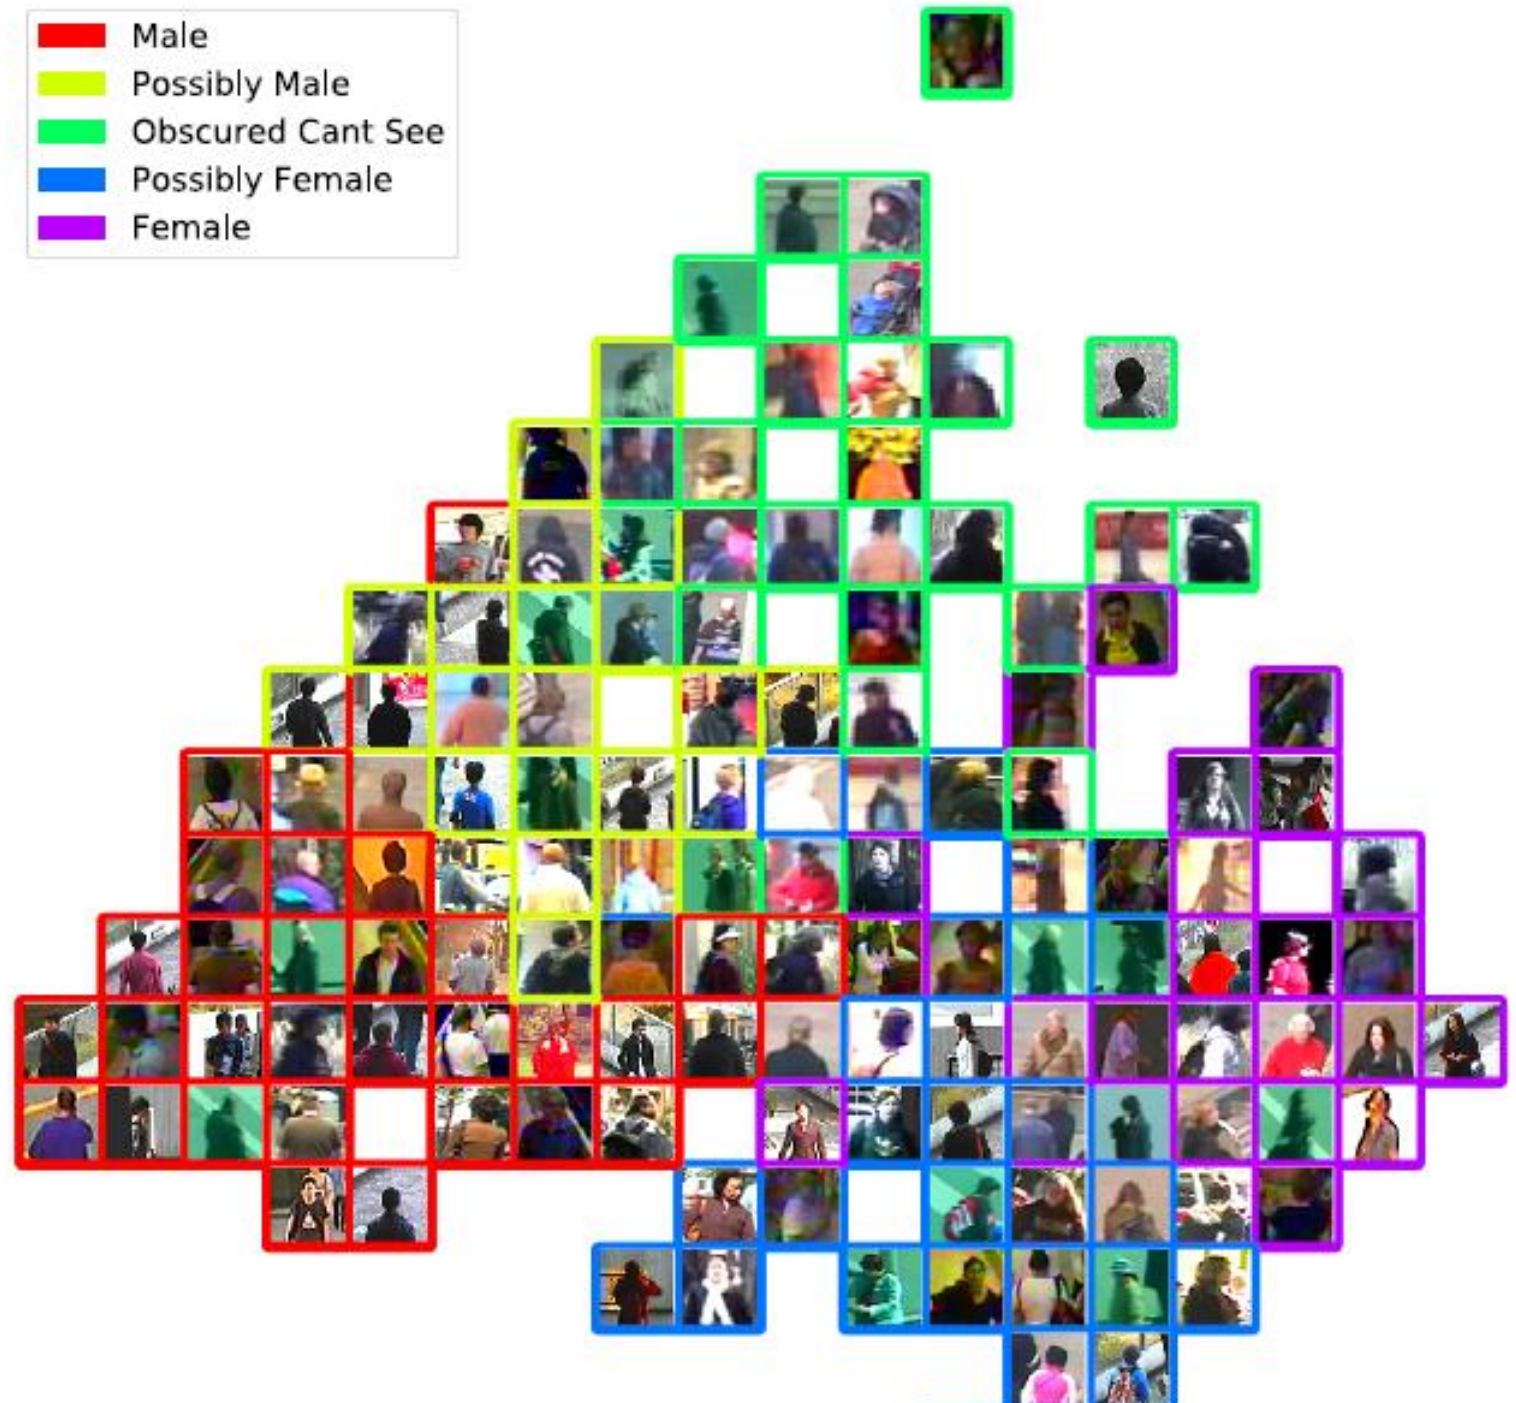

Conventional attribute-based analysis

Retrieval architecture

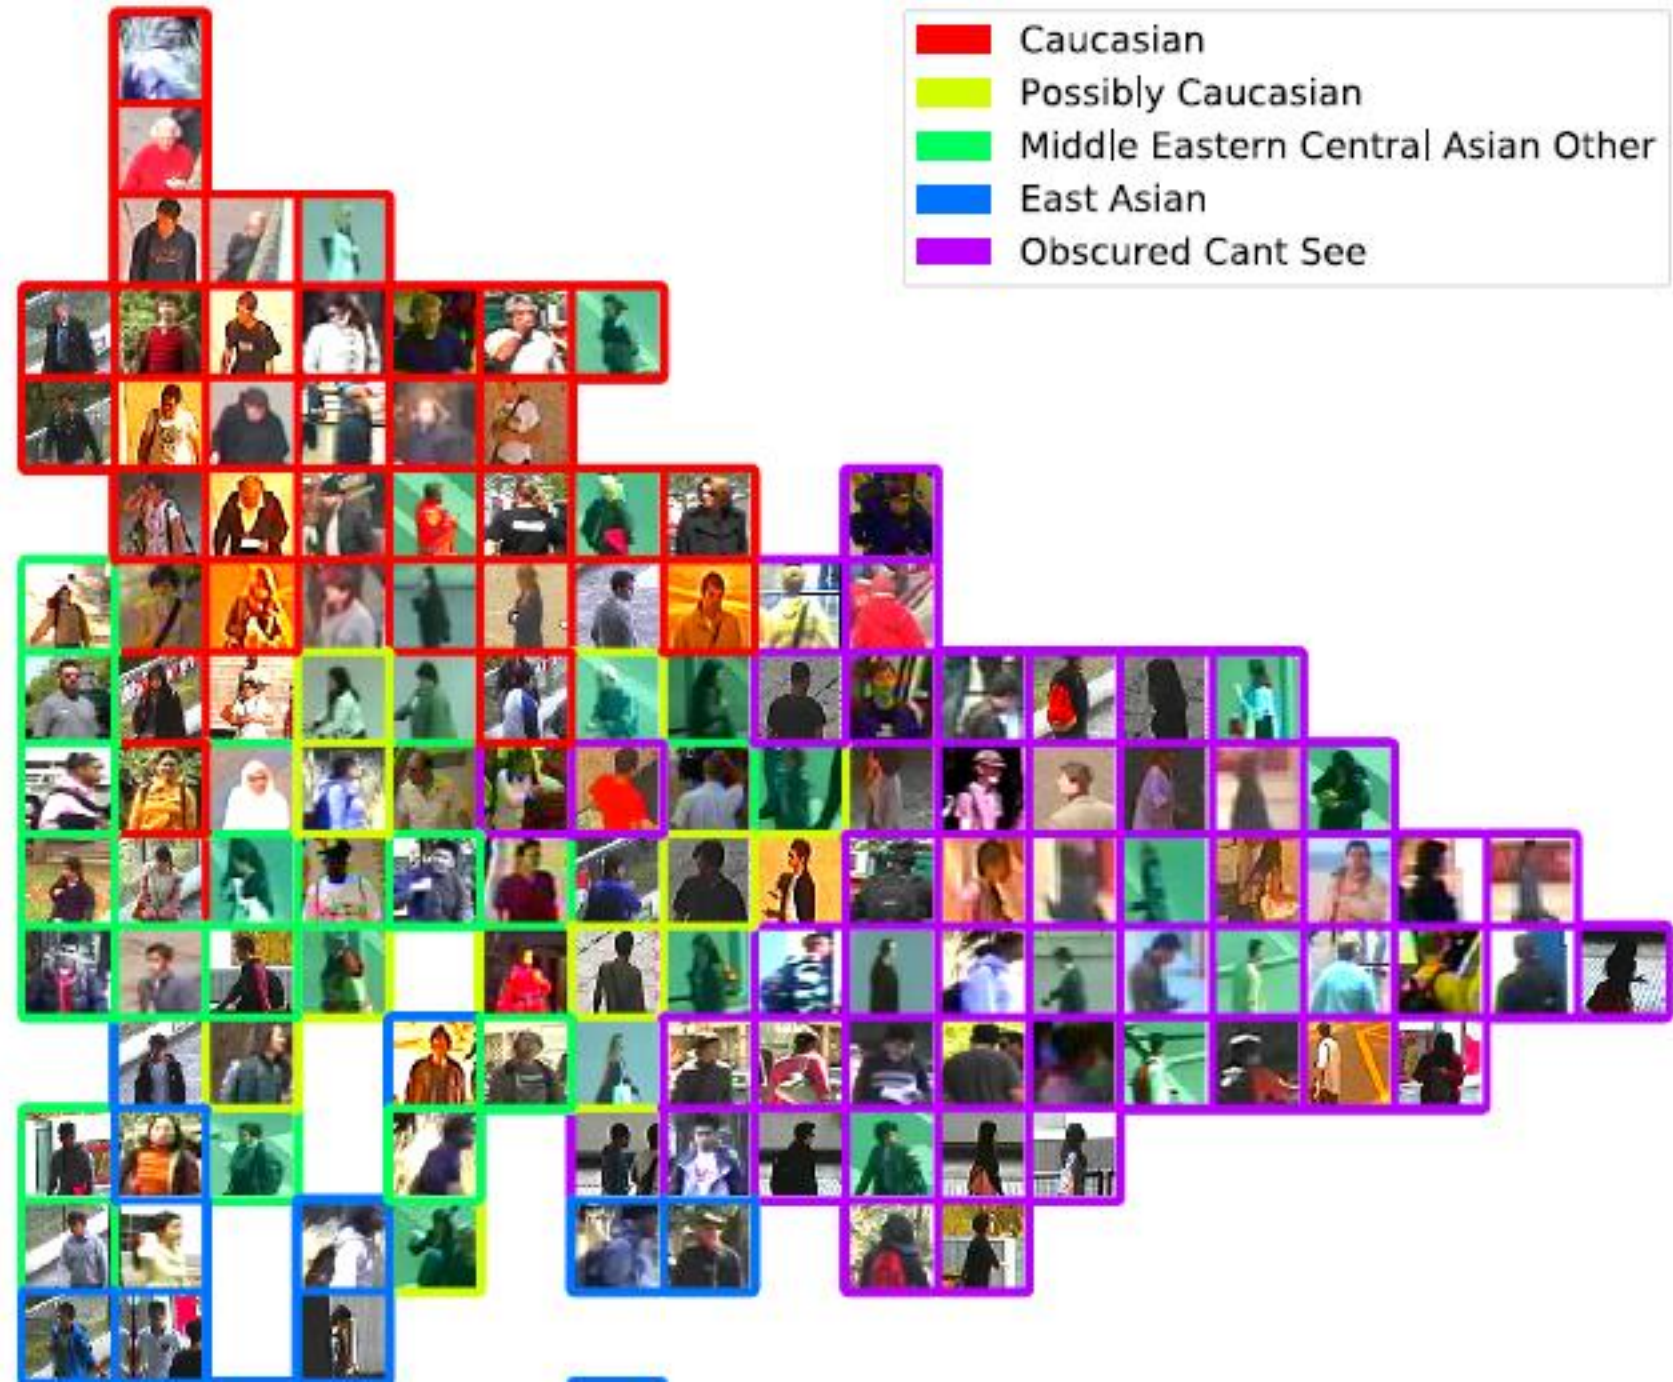

# Gender

# Ethnicity

# Analysing video by deep learning

# Conclusions

- Computer vision is **changing the way we live**
- Computer vision uses modern hardware and modern cameras to achieve what we understand by '**sight**'
- No technique is a **panacea**: many **alternatives** exist
- Computer vision is **larger** than this course
- We have covered **a basis**, Jon will **extend** it
- **Enjoy!!**
